Video creator for windows and mac Your question is ambiguous dude If you are asking how you can make the hostname 'localhost' resolve to something other than 127.. Thanks for your replies, my classpath was able to see the pre-2.5 servlet API jar, that is located in the jre/lib/ext(I have included sometime in the past).. 0 0 1 then the answer is: • change the localhost entry in your '/etc/hosts' file, and mess with the network configs, and • DON'T DO IT because you are liable to break things.

If you are asking how to get Tomcat to accept requests on some other IP address, then the answer is to edit the \$CATALINA_HOME/conf/server.
